| Use Case 2 | Manage Project |
| --- | --- |
| *Scope:* | System-wide |
| *Primary Actor:* | Project Leader |
| *Administrator, Project Leader:* | • Administrator: Assign project leader.<br><br>• Project Leader: Assign activities to project and manage them. |
| *Description:* | Makes it possible to assign a project leader, change project leader and assign and manage activities to project |

*Main Success Scenario:*
1. Admin assigns project leader.

2. Project leader modifies project values.

3. Project leader assigns activities to project.

*Alternative Scenarioes:*

1.a Admin assigns no project leader:

    1. The project leader is removed, and the project leader value is null

2.a Project leader sets empty name:

    1. System shows failure message.
    2. System returns to step 2.

2.b Project leader sets null start date:

    1. Start date is removed, and the value is set to null.

2.c Project leader sets null end date:

    1. End date is removed, and the value is set to null.

2.d Project leader sets start date after end date:

    1. System shows failure message.
    2. System returns to step 2.

2.e Project leader sets end date before start date:

    1. System shows failure message.
    2. System returns to step 2.

3.a Project leader adds null activity:

    1. System shows failure message.
    2. System returns to step 3.

3.b Project leader adds duplicate activity:

    1. System shows failure message.
    2. System returns to step 3.
